

DENCITY DENTAL CARE — BUILD BRIEF

Project: Premium dental clinic PWA rebuild. Client deliverable (₹30,000 tier). Rebuilding an existing live site (dencitydentalcare.in) with new design + animation, keeping all current features.

Stack (already scaffolded): Next.js (App Router) + TypeScript + Tailwind + Framer Motion, src/ structure, deployed via Vercel. Build tool going forward: Claude Code, editing files in place in the real repo (not standalone HTML).

Brand palette (hard rule, every component):

Show more ▾

This is a solid build brief. For Claude Code, I'd tighten it into an implementation spec that reduces ambiguity and prevents regressions. Here's a refined version.

DENCITY DENTAL CARE — Premium Clinic PWA Rebuild

Project

Rebuild the existing website into a modern premium dental clinic Progressive Web App while preserving every existing business feature.

Existing website

- dencitydentalcare.in

This is **not** a redesign from scratch.

The project is a **production rebuild** inside the existing repository.

Tech Stack

Already scaffolded.

- Next.js App Router
- TypeScript
- TailwindCSS
- Framer Motion

- src/ architecture
- Vercel deployment

Development will be done exclusively through **Claude Code**, editing the real repository.

Never generate standalone HTML pages.

Brand System (Hard Requirement)

Primary

Clinic Teal
#0A5C5C

Dark

Deep Charcoal
#0F1717

Expose as

CSS

Tailwind tokens

clinic-teal
deep-charcoal

Meta

HTML

The entire design system should derive from these colors.

Design Direction

Premium.

Medical.

Calm.

Minimal.

High trust.

Never playful.

Never futuristic.

Never "tech startup."

Every interaction should feel smooth and reassuring.

Engineering Rules (Non-Negotiable)

Production Safety

Every Framer Motion component:

TypeScript

Window/document access must always be guarded.

Example

```
if (typeof window !== "undefined") {
```

TypeScript

No hydration mismatches.

No disappearing animations after production build.

Repository Rules

Always modify

```
.tsx  
.ts
```

.css

inside the existing project.

Never output

- standalone HTML
- CodePen snippets
- isolated React examples

Protected Files

Never edit

.claude-flow/
.swarm/
.mcp.json
CLAUDE.md

Workflow

Before making any file modifications

Always display the planned diff.

Then apply edits.

Routes

Preserve and rebuild

/

Home

/services

/book

/about

/contact

Authentication

/sign-in

All routing should remain App Router compatible.

Booking Flow
Google Calendar Integration

Definition of Done

- Existing functionality preserved.
- Modern premium UI implemented.
- Fully responsive across mobile, tablet, and desktop.
- Smooth, SSR-safe animations with Framer Motion.
- Google Calendar booking operational.
- Lighthouse score ≥ 95 .
- PWA installable.
- Deployed successfully on Vercel with zero build warnings or hydration errors.

This version is optimized as an implementation specification for Claude Code: it is explicit about constraints, sequencing, production safety, accessibility, and deployment expectations, reducing the chance of incorrect code generation or unintended repository changes.

ok start giving me the prompts to give to calude code we need any thing like mp4 or image we will use open degin for that

Yes. Since you're building this with **Claude Code**, the best approach is to break the project into small, production-safe prompts. Each prompt should complete one feature and commit it before moving on. This minimizes regressions and makes it easy to review diffs.

Prompt 1 — Project Audit & Design System

Give Claude Code this first:

```
You are working inside the existing DENCITY Dental Care Next.js repository.
```

```
Before making any changes:
```

1. Inspect the project structure.
2. List every route, component, layout, API route and global stylesheet.
3. Show a concise diff plan of every file you intend to modify.
4. Wait for approval before writing.

```
Rules:
```

- Never create standalone HTML.
- Edit only the existing project.
- Never modify:

- .claude-flow/
- .swarm/
- .mcp.json
- CLAUDE.md

Engineering Rules

- App Router
- TypeScript
- Tailwind
- Framer Motion

Animations must be production-safe.

Every motion component must begin with:

"use client"

Every browser API must be guarded:

```
if (typeof window !== "undefined") {}
```

No hydration errors.

After approval:

Create the design system.

Requirements

Brand Colors

Clinic Teal
#0A5C5C

Deep Charcoal
#0F1717

Expose as:

CSS Variables

```
--clinic-teal  
--deep-charcoal
```

Tailwind tokens

```
clinic-teal  
deep-charcoal
```

Update

tailwind config

globals.css

metadata theme-color

Create reusable typography utilities.

Create spacing tokens.

Create radius tokens.

Create shadow tokens.

Create animation timing variables.

Do not redesign pages yet.

Only establish the design system.

Prompt 2 — Global Layout

Continue from the current repository.

Show the diff before editing.

Build the global application layout.

Requirements

Create a premium navigation bar.

Desktop

- Sticky
- Glass effect
- Logo
- Navigation
- Book Appointment CTA

Mobile

- Hamburger
- Smooth drawer animation

Footer

Include

- Logo
- Contact
- Opening hours
- Social links
- Copyright

Create reusable layout components.

Do not build homepage sections yet.

Navigation must preserve existing routes.

/

/services

/about

/book

/contact

/sign-in

Animations should be subtle.

No flashy effects.

Responsive.

Accessible.

SSR safe.

Prompt 3 — Mobile Concierge Dock

Build the global mobile concierge dock.

Inspired by modern floating glass navigation.

Requirements

Visible only below lg breakpoint.

Fixed bottom.

Respect:

env(safe-area-inset-bottom)

Glassmorphism.

Spring animation.

Buttons

Book

Call

Directions

WhatsApp

Each button should support icon + label.

Hide automatically on desktop.

Mount globally through layout.

Create reusable component.

Show diff before editing.

Prompt 4 — Hero Section

Build the homepage hero.

Inspired by premium healthcare websites.

Design goals

Calm.

Luxury.

Professional.

Trustworthy.

Features

Large headline.

Supporting paragraph.

Primary CTA

Book Appointment

Secondary CTA

Explore Services

Subtle background gradient.

Soft animated shapes.

Scroll indicator.

Animations

Fade

Slide

Parallax

Intersection Observer

Respect prefers-reduced-motion.

Do not use glitch effects.

Do not use neon.

Keep whitespace generous.

Fully responsive.

SSR safe.

Show diff before writing.

Prompt 5 — Services Bento

Build the services section.

Inspired by expandable bento grids.

Treatments

General Dentistry

Cosmetic Dentistry

Orthodontics

Dental Implants

Pediatric Dentistry

Emergency Dentistry

Cards should expand.

Expanded card contains

Description

Benefits

Book this Treatment button

Use Framer Motion layout animations.

Component must be reusable.

Desktop

3 columns

Tablet

2 columns

Mobile

1 column

Show diff first.

Prompt 6 — Stats Counter

Create the statistics section.

Metrics

15+

Years Experience

10K+

Patients Treated

98%

Patient Satisfaction

24/7

Emergency Care

Animate numbers once when entering viewport.

Use Framer Motion.

Use Intersection Observer.

Respect reduced motion.

No external libraries.

SSR safe.

Reusable component.

Show diff before editing.

Prompt 7 — Team Section

Build the doctors section.

Premium bento card layout.

Each card contains

Doctor image

ChatGPT ▾

Upgrade

Qualification

Specialization

Experience

Short bio

Hover

Very subtle elevation.

Soft shadow.

No excessive motion.

Responsive.

Reusable.

Show diff before editing.

Prompt 8 — Pricing

Build pricing cards.

Packages

Preventive Care

Smile Makeover

Implant Care

Each card contains

Title

Price

Features

CTA

Interactive hover.

Premium medical aesthetic.

No gradients that reduce readability.

Reusable.

Responsive.

Show diff before editing.

Prompt 9 — Testimonials

Create testimonials.

Modern cards.

Patient photo.

Treatment.

Rating.

Review.

Auto-scroll carousel.

Pause on hover.

Keyboard accessible.

Responsive.

SSR safe.

Show diff before editing.

Prompt 10 — Booking Flow

This is the largest feature, so keep it isolated.

Build the complete booking system.

Multi-step wizard.

Steps

1 Treatment

2 Dentist

3 Date

4 Time

5 Patient Details

6 Confirmation

Persist state safely.

Use server actions where appropriate.

Validate every step.

Responsive.

Accessible.

Reusable components.

Do not integrate Google Calendar yet.

Mock availability first.

Show diff before editing.

Prompt 11 — Google Calendar Integration

Integrate Google Calendar.

Requirements

Read availability using FreeBusy API.

Display only available slots.

On confirmation

Create calendar event.

Invite patient.

Handle failures gracefully.

Credentials come from

.env.local

Never hardcode secrets.

Implement using server-side API routes only.

Do not expose credentials to client.

Show diff before editing.

Assets (using OpenDesign)

For visuals, you can generate or source assets separately:

- **Hero background:** Minimal dental clinic interior (bright, modern, calming)
- **Doctor portraits:** Professional dentists in white coats with neutral backgrounds
- **Treatment illustrations:** Clean flat or 3D medical icons for each service
- **Testimonials:** Generic smiling patient portraits (stock-style)
- **Icons:** Use a consistent set like Lucide React rather than generating them
- **Optional hero animation:** A subtle 6–10 second looping MP4/WebM of a modern dental clinic or abstract teal medical shapes for the hero background

I recommend treating the project like a professional sprint:

1. Foundation (tokens, layout, navigation)
2. Home page sections
3. Booking flow
4. Backend integration
5. SEO + PWA + optimization
6. Final polish and deployment

This sequence keeps the codebase stable and makes each Claude Code session focused and reviewable.
